ASTRO

Recessed low-profile downlight

Lighting for Office

Light is fundamental to our working lives. The future of office lighting needs to create attractive, enticing working spaces to encourage people to choose the office, rather than work from home. Light needs to facilitate collaborative working, allowing people to interact, engage and be inspired by one another. Explore our lighting solutions to see how we can provide your business with the ideal office environment.

Lighting Solutions

We understand that office facilities need to be geared around employees to increase performance and promote wellbeing. Switching from fluorescent lighting to LED is more than an energy saving solution, it can have significant benefits in terms of staff wellbeing, which in turn will boost productivity and efficiency in the workplace. The right lighting aids concentration and focus, as well as reducing energy consumption throughout the building.

Lighting for Wellbeing

The latest research tells us that the lighting can have a significant effect on our wellbeing - whether in the workplace, at school, whilst focusing or relaxing - and it's up to everyone to ensure that people are provided with the right light for their environment, to maximise health and boost productivity.

Lighting for Healthcare

Healthcare environments have very specific lighting requirements, to ensure that patients, hospital staff and visitors are catered for with the ideal lighting design. Patients must be kept comfortable on the wards, in order to benefit their wellbeing. The right lighting in facilities like this minimises glare and can be controlled to suit patient requirements, providing the ideal environment to aid recovery.
